

ProSet Fire Rated Utility Box Sample Specification

1. Scope

Provide all components including wall brackets for the 8" wide x 6" high x 3-½" deep Hi-Temp PVC Fire Rated Utility Box used to connect washing machines, ice machines or other uses inside a fire rated wall.

Provide all other approved attachments for water supplies with quarter turn shut off valves with or without water hammer arrestors in accordance with local codes along with 2" drainage opening for washing machines or other uses and special cover plate flange.

2. Materials

The Utility Box and cover are made of a Hi-Temp Type I, PVC resin. The interior of the box is permanently marked with the Warnock Hersey Listing PS/PV 120-08 and the cover plate label shows the ProSet logo.

ProSet's 6" X 4" proprietary Red Intumescent Adhesive Pad is permanently attached to the back of the box. Shut off valves and air arrestors comply with NSF Standards and National Plumbing Codes.

3. Installation

The plumbing contractor shall be responsible to secure the box inside the wall at the proper location and in accordance with the manufactures installation guide and the Warnock Hersey listing PS/PV 120-08.

When making the final water connections make sure all the pipe connections, valves and air arrestors are without leaks. Attach the cover plate to complete the installation.
